Summary

Final-year Computer Science student with a strong foundation in software development and problem-solving. Passionate about building impactful applications and exploring innovative solutions through full-stack development.

Education

ITM(SLS) Baroda University **2022-2026**
Bachelor of Technology - Computer Science, ***CGPA: 8.81*** Vadodara, Gujarat
Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming, Database Management System, Operating System, Computer Network

Technical Skills

Languages: Python, JavaScript, C/C++
Frontend: HTML, CSS, React, Tailwind
Backend: Node.js, Express.js, MongoDB, REST APIs, JWT, Firebase
Developer Tools: Git, GitHub, Postman, VS Code, Cloudinary, Android Studio
Additional Libraries: Puppeteer, BeautifulSoup, Tkinter

Projects

Collab Horizon | React | Tailwind | Node.js | Express.js | MongoDB | Cloudinary **Source Code**

- Designed and developed **Collab Horizon**, **a real-time collaboration platform** to streamline project management. Engineered features for task tracking and team communication to enhance team efficiency and project planning.
- Implemented **secure user authentication** with **role-based access control**, ensuring data privacy and enabling seamless team collaboration.
- Integrated **Cloudinary** for efficient, scalable image handling, enabling high-performance profile management and real-time collaborative file sharing.

Smart Attendance System | React | Tailwind | MongoDB | Flask | TensorFlow **Source Code**

- Architected a full-stack web application with **React, Flask** and **MongoDB** as a prototype to automate student attendance management, which **decreases manual errors by 5% and cuts administrative time by 10 hours weekly**.
- Trained a **ResNet50 deep learning model** using **TensorFlow** that achieved over **98% testing accuracy** for face classification across varied lighting and angles, enhancing attendance reliability.
- **Collaborated as backend and ML lead in a 3-member team,** integrating the trained model with Flask APIs and MongoDB to reduce false positives and improve attendance record accuracy.

Query Forge | React | Tailwind | Node.js | Express.js | MongoDB | Puppeteer | Gemini Flash 2.5 **Source Code** | **Live Demo**

- Developed **Query Forge, a full-stack web app** that converts your prompt and PDFs into interactive Q&A sets.
- Integrated **Google Gemini Flash 2.5** for intelligent prompt-based Q&A generation and **Puppeteer** for web scraping from provided URLs.
- Implemented an **API-Key based answering system**, enabling seamless integration with external applications.

Scrape Spidey | React | Tailwind | Node.js | Express.js | Puppeteer | Browserless API **Source Code**

- Developed **ScrapeSpidey, a RESTful API service** that extracts profile data from different coding platforms like **GeeksforGeeks**, **Codechef**, **Hackerank**, and **Code360** enhancing data accessibility for **competitive programmers**.
- Utilized **Puppeteer** for efficient web scraping and **Browserless API** to **integrate online chromedriver**, enabling automated data retrieval from dynamic web pages.
- Designed and implemented a **modular backend architecture** using **Node.js** and **Express.js**, ensuring scalability and maintainability and a **user-friendly documentation** using **React** and **Tailwind** for developers's ease of use.

Achievements

- Reached a peak LeetCode **Contest Rating of 1777** by participating in 70+ coding contests.
- Secured **Rank 1** in Illuminati Code Clash 2025 at ITM(SLS) Baroda University among **100+ participants**.
- Secured **1805/32563**, **1698/31670** and **2206/35629** ranks in LeetCode Weekly 420, Biweekly 161 and Weekly 464 contests respectively.
- Currently **ranked 1st** in the Institute leaderboard on GeeksforGeeks with **1400+ coding score**.

Certifications

- **Deloitte Australia Technology Job Simulation on Forage** **July 2025**
  Completed a job simulation involving development and coding and wrote a proposal for creating a dashboard.
